¹ For the purpose of this publication, the terms “country” and “countries” cover countries, territories and areas.

² Risk of yellow fever transmission is defined as yellow fever being currently reported or having been reported in the past and presence of vectors and animal reservoirs representing a potential risk of infection and transmission.

³ Country requirements are subject to change at any time. It is important that travellers ensure that they know the requirements of the country to which they are travelling by checking with the relevant consulate or embassy.

Period of validity: in accordance with the amendment to the IHR (2005) adopted by the World Health Assembly in resolution WHA67.13, **from 11 July 2016 the period of validity for all certificates of vaccination against yellow fever changes from 10 years to the duration of the life of the person vaccinated, including for certificates already issued and new certificates.** Accordingly, as of 11 July 2016, valid certificates of vaccination presented by arriving travellers cannot be rejected on the grounds that more than ten years have passed since the date vaccination became effective as stated on the certificate; boosters or revaccination cannot be required.

⁴ Includes yellow fever vaccination requirement for traveller having transited more than 12 hours through the airport of a country with risk of yellow fever transmission.

⁵ Includes yellow fever vaccination requirement for traveller having transited through the airport of a country with risk of yellow fever transmission.
